**Priority number(s):** JP19970082560 19970401

## **Report a data error here**

### Abstract of JP10285502

**PROBLEM TO BE SOLVED:** To simplify the compression processing of data before transmission. **SOLUTION:** In the case of using serial interfaces 43 and 19, a CPU 31 decodes the JPEG data of the images of  $640 \times 480$  picture elements first and then, converts the images of  $640 \times 480$  picture elements into the reduced images of  $80 \times 60$  picture elements for which a picture element number in a horizontal direction is the multiple of 8. Further, the CPU 31 generates the data of  $80 \times 64$  picture elements for which dummy data for 4 lines are added to the data. Then, JPEG encoder and decoder 41 compresses the data of  $80 \times 64$  picture elements and the CPU 31 outputs the compressed JPEG data through the serial interface 43 to a computer 1. Then, the CPU 11 of the computer 1 decodes the data, then converts them into the thumb-nail images of  $106 \times 80$  picture elements and displays them at a display 3.
